

## Healthcare

### Installations

With over 10,000 systems installed worldwide, ADC is the market leader for wireless systems that enable mobile phones, PDA's, pagers, and public safety radios to consistently and clearly operate inside buildings where coverage is weak or nonexistent.

ADC's solutions are installed in a number of healthcare facilities so that physicians and employees can be reached and productive, visitors are able to contact friends and loved ones, and hospital emergency response teams can reach each other using push-to-talk capabilities.

In addition, because ADC's equipment provides a harmless "blanket of wireless coverage" throughout a hospital, mobile devices will operate at a lower power level and thus pose less of a risk of interfering with equipment in the hospital, such as patient monitoring devices.

Following is a list of some hospital installations using ADC solutions. In addition, a number of new installations are now in process.

#### Alexian Brothers, Illinois:

With 473 licensed beds and a medical staff of more than 700 physicians representing over 40 specialties, Alexian Brothers

Medical Center is regarded as one of the best hospitals in the nation. The ADC system, which covers almost 1 million square feet and over 6 floors, was installed so that hospital staff and medical personnel can be assured they have crystal clear communication in critical areas throughout the hospital.

#### Baptist Health, Arkansas:

Baptist Health is the most comprehensive healthcare system in Arkansas, comprised of more than 80 facilities - including major medical

centers, family clinics, therapy and wellness centers. ADC's in-building solution was installed at Baptist Health's Little Rock and North Little Rock Medical Centers, covering over 2 million square feet. The Little Rock Medical Center is the largest hospital in Baptist Health and the North Little Rock Medical Center is the newest addition to Baptist with 402,000 square feet of space with 248 patient beds. As a result of the ADC installation, the staff and personnel at both hospitals now enjoy enhanced wireless communication.

#### Borgess Medical, Michigan:

Borgess Medical Center recognizes that the needs for healthcare change and healthcare environments need to change with them.

In response, Borgess has initiated a 3-year \$76.9 million renovation to better serve their patients, physicians and employees. As part of this campaign, ADC's equipment was installed in over 1 million square of the hospital, helping deliver clear, uninterrupted wireless communication.

# Healthcare Installations

## Shands, Florida:

Shands at the University of Florida is a leading referral medical center with over 500 physicians representing 110 medical specialties. The hospital is twelve stories high and is comprised of over 1.2 million square feet. Shands wanted to embrace wireless communications

in a manner that not only facilitated high performance voice and data communications, but also mitigated interference concerns with medical equipment. ADC's extensive experience working in healthcare facilities allowed it to take on the challenge with practiced skill. The geographical space, which included operating rooms, pre-op, post-op, neo-natal, labor and delivery, nose throat and ear clinic, x-ray, patient rooms, children's ward, intensive care unit and cardiac care unit called for designs that provided ample coverage within economical solutions.

## Other healthcare installations by ADC include:

- ABC Hospital – Mexico
- Alexian Brothers – Illinois
- Amgen – California
- Amgen – Rhode Island
- Arkansas Hospital One – Arkansas
- Baptist Healthcare – Kentucky
- Baton Rouge Medical Center – Louisiana
