

AT&T Wireless Installations

With close to 3,000 systems installed worldwide, LGC Wireless is the market leader for wireless systems that enable mobile phones, PDA's, pagers, and public safety radios to consistently and clearly operate inside buildings where coverage is weak or nonexistent.

LGC's solutions are installed in both public and private buildings, allowing wireless users to keep in contact with friends and family, sales executives and service personnel to be more responsive to customer needs, and visitors and employees to be more productive, wherever they are.

For several years AT&T Wireless has used LGC solutions to compliment its macro network with consistent indoor coverage and capacity, thus economically gaining additional revenue and satisfying customer needs.

AT&T Wireless has installed LGC systems in over 150 locations across the nation. For example, AT&T Wireless recently used LGC equipment to cover a number of buildings for Genentech near San Francisco, California. In this situation AT&T and Genentech shared the costs for the in-building equipment and services, thus enabling an attractive return for both AT&T and the end customer.

Denver International Airport

AT&T Wireless uses LGC for coverage throughout the airport

In addition to providing industry-leading system performance, LGC is known within AT&T Wireless for meeting installation deadlines without unexpected change orders or cost overruns. Customer survey results from AT&T Wireless Engineering consistently indicate a high level of satisfaction with LGC's products, installation services, and responsiveness.

Following is a list of some of the AT&T Wireless sites that use LGC solutions. In addition, a number of new installations are now in progress.
